FOREWORD
IT IS TIME FOR SECURITY.

For more than 50 years, we have been designing, manufacturing and distributing products for time recording and access control. Based on this long experience, we offer you in-depth know-how and practical expertise concerning all aspects of building security, time management and biometrics for high-security applications. As a medium-sized company with over 150 employees in Germany, we are situated close to you, our partners and customers.

Now it is time to take advantage of the benefits of digitization. Join forces with PCS to design modern working environments and comprehensive building security. Build on our acclaimed INTUS terminals for time recording and access control combined with our comprehensive DEXICON software as the future-oriented basis for all your New Work and Smart Building projects.

We set standards in innovation, quality and design. Our ambition is to provide our customers with truly complete solutions. Working closely with leading industry partners, we deliver all the required building blocks in a coordinated way as your one-stop source. There is one thing we care about above anything else, and that is your time recording and access control project. Let us start together. It is time for security.

ORIGIN AND GROWTH.

PCS was founded in 1970 as Periphere Computer Systeme GmbH with a focus on process control computer and laboratory data systems. In the 1980s, the company specialized on production data collection. In the 1990s, we began developing our INTUS time recording terminals for the growing HR market. We have continuously expanded our range of products and increasingly focused on access control and biometric access control technologies from the year 2000.

Today, we see ourselves as a solution provider for enterprise-wide building security. With the DEXICON software, we have created a platform for networked access control and time recording. This is where all the different threads come together.

1970s

Establishment of PCS. In 1973, the company introduced the first German "one-board computer", the CADMUS workstation.

1980s

Along with the CADMUS family, the first INTUS terminals for production data collection (PDC) were developed.

1990s

INTUS – the terminal family setting new standards in innovation, quality and design.

As a system integrator in the best sense of the word, PCS supplements its own portfolio with products from selected software and technology partners. This allows us to leverage the strengths and agility of the German SME sector. The trusting cooperation with a network of partners results in remarkable innovations and true added value.

We live cooperation and appreciate our partners' great diversity of experience. Working together to deliver the best results for our customers is at the center of our ambition. Our products and solutions have become an important, integral part of modern smart buildings and digital factories.

2000s

Evolution of the INTUS family in the areas of time recording and access control.

2010s

INTUS 1600PS introduced as the first palm vein authentication access reader for high-security areas.

2020s

PCS is becoming a solution partner for time recording and enterprise-wide building security. The product portfolio comprising hardware, software and services is further expanded.
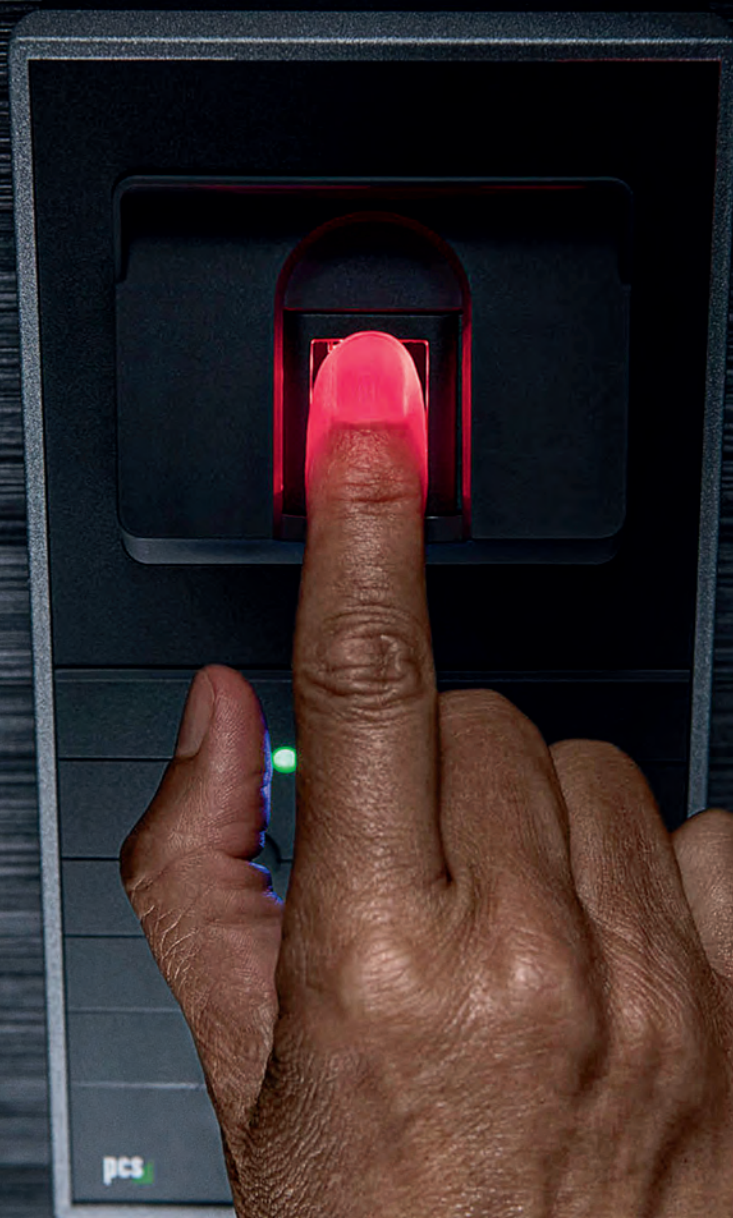

Terminals: It all began with the collection of laboratory and production data in the industrial environment.

INTUS terminals and INTUS readers are
the foundation of our brand.

AMBITION
INNOVATION, QUALITY AND DESIGN ARE THE GUIDING PRINCIPLES.

When it comes to developing our hardware, we are uncompromising. INTUS terminals regularly convince design award juries, but what's even more important for us: They also convince our customers thanks to their reliability and excellent usability.
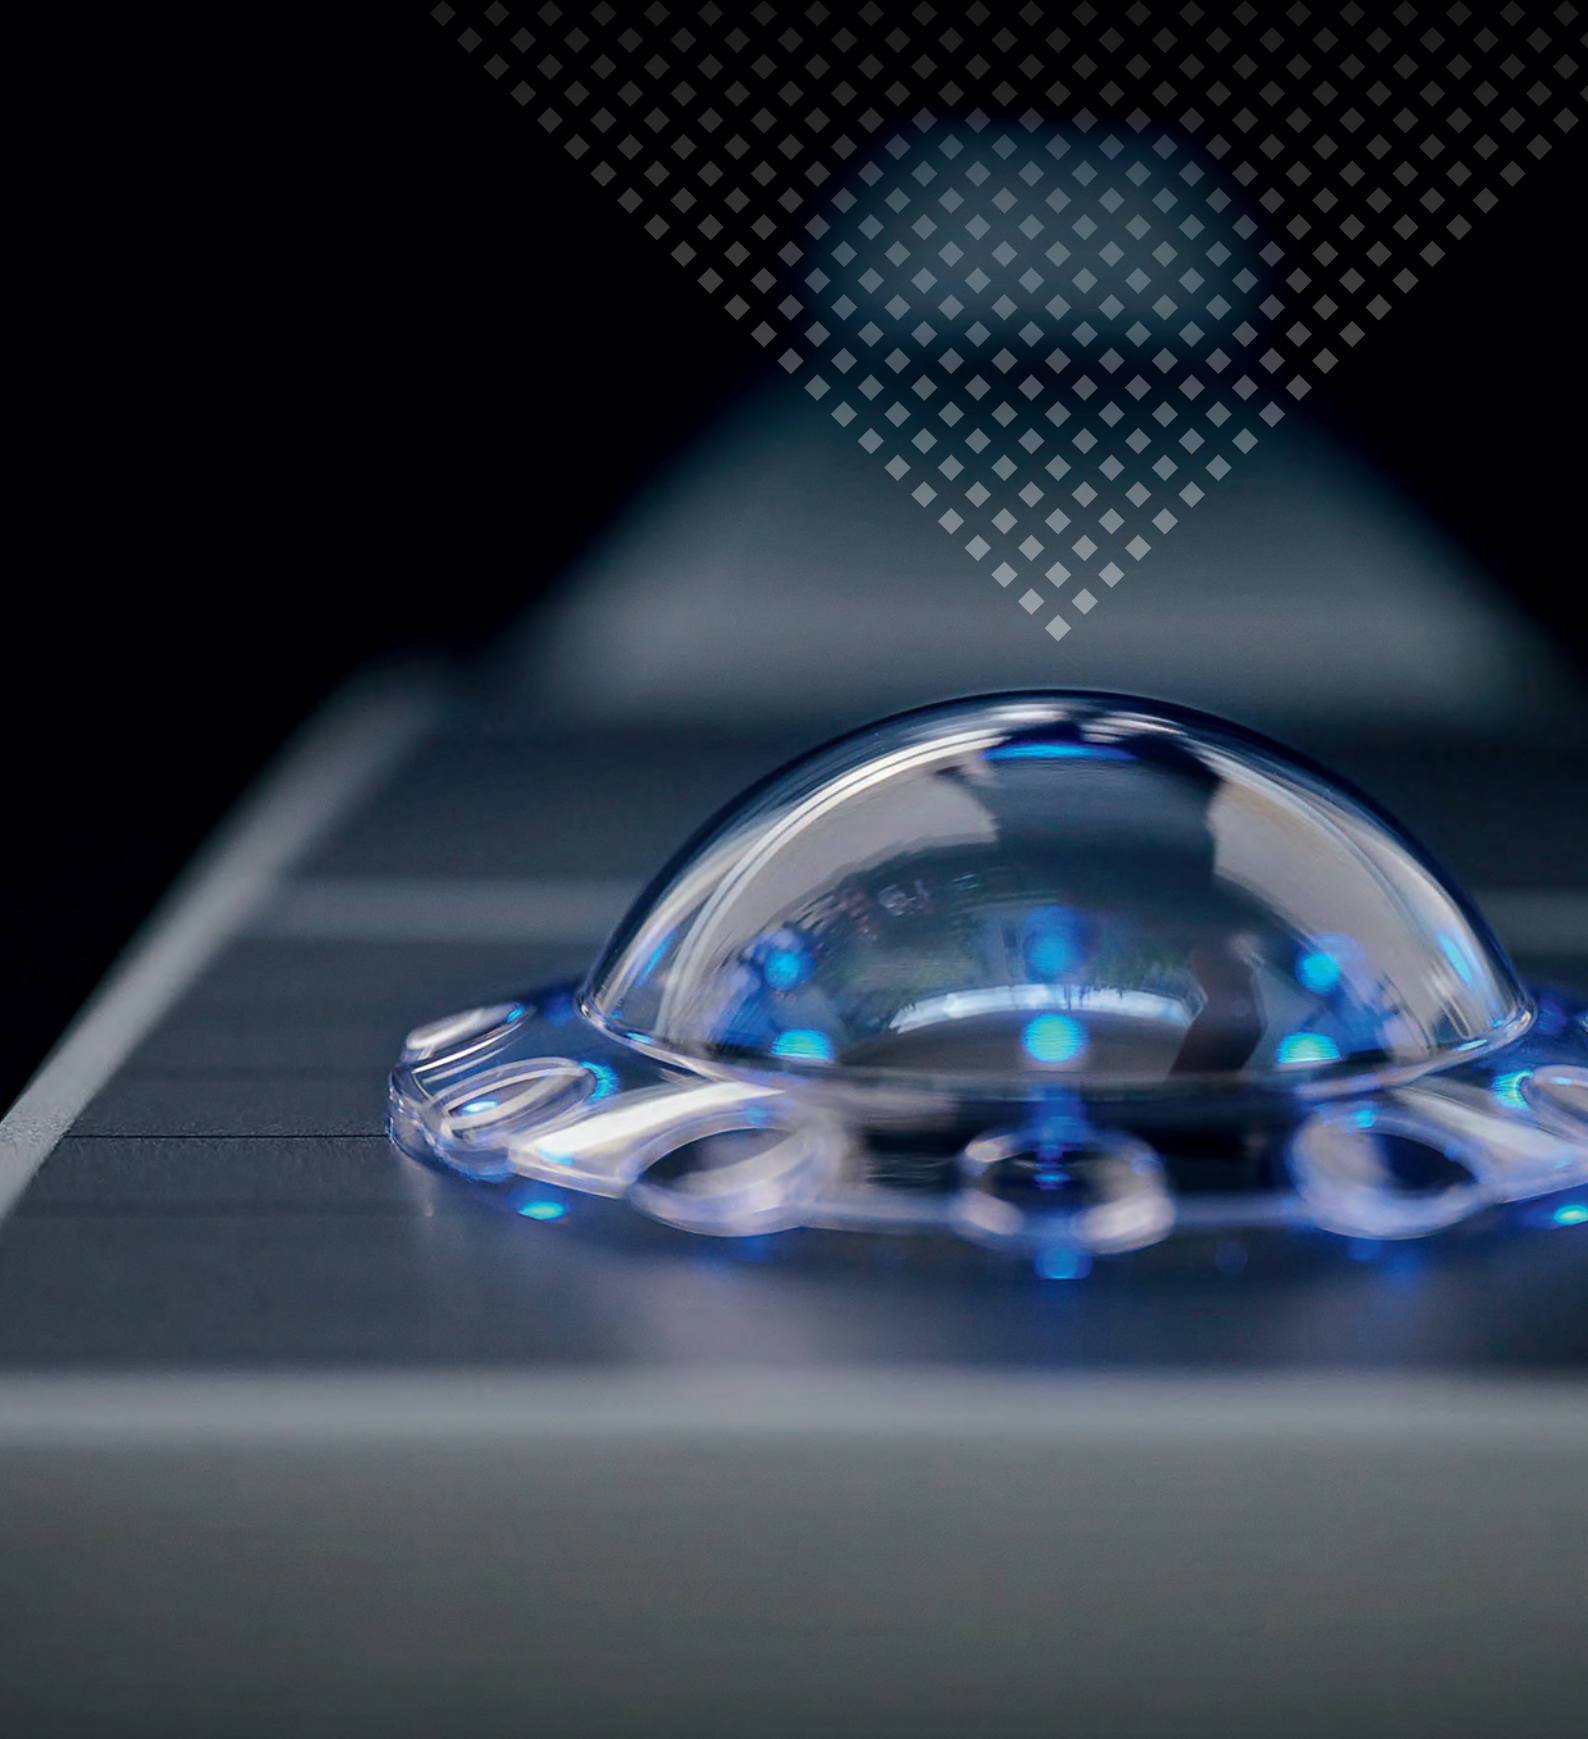

Our software sets standards as well: With DEXICON, we have created a platform for building security. The integration with ERP systems ensures easy maintainability and data conformity. Just take the certified interfaces to SAP that PCS has been offering for more than 20 years. This is critical for us since DEXICON bundles the various security systems: visitor management, vehicle traffic management on a company's premises and video surveillance can be integrated along with access control.

We aim for outstanding products excelling in innovation, quality and design.

"Our ambition is to achieve a symbiosis of functionality and technology. The sophisticated design of our INTUS terminals goes along with their ergonomic operation. The many design and innovation awards we have received and continue to receive for our PCS products are proof of this."

Daniel Berning
Head of Product Management

FOCUS

DESIGNED FOR A LONG SERVICE LIFE.

Ensuring a long service life for our products is an important focus of our business.

INTUS hardware is built from selected electronic components, subjected to 48-hour continuous performance testing to assure quality. PCS products are "Made in Germany" in our factory in Munich. Reliability is the decisive criterion in day-to-day operation. PCS products for time recording and access control are protected against failure even in the case of a black-out.

Our focus always evolves in dialog: The DEXICON software relies on intelligent functions for the day-to-day operation of the security system (including alarms and emergency plans). New features always take account of the changing requirements of the market. In this way, PCS combines sustainability and innovation in product design.

Our network of partners has continuously grown over the years. A wide range of cooperation projects has allowed us to design a great variety of solutions for the benefit of our customers. In this way, we are able to implement projects of all sizes and for all industries while invariably protecting our customers' investment thanks to our products' long service life.

PARTNERSHIP

CENTERING ON THE "WE".

"Our software partners are very important to us, as they are close to the customer. They know that they will receive excellent products and continuous support when they take PCS on board. Ultimately, it's this trusting relationship, working shoulder to shoulder, that convinces our common customers."

Markus Knies
Head of Sales

"As PCS's development department, we always keep our finger on the pulse of the times, without acting hastily. We consciously opt for high-quality product design to provide our customers with nothing but outstanding hardware."

Markus Schraufstetter
Head of Hardware Development

Networking is an important building block of success. We rely on a large network of cooperation partners. More than 100 software houses offer solutions for time management, workforce management and workforce scheduling in conjunction with our INTUS terminals for time recording and access control. We will advise you independently of the software because a decision for INTUS hardware equals a decision for investment security.

We have been cooperating with our partners for such a long time – more than 30 years in many cases – that a smooth implementation of your project and optimum integration of PCS's INTUS terminals and the partner's time management software is ensured.

Cooperation with technology partners enhances PCS Systemtechnik's solution approach and allows us to offer you selected products supplementing the PCS solutions. PCS works hand in hand with technology partners, especially in areas such as ID card technology, mechatronics, video technology, perimeter facilities or visitor management.

In our complex world there is a need for institutions imparting knowledge and transferring know-how. PCS is therefore a member of the BHE (German Association of Manufacturers and Producers of Security Technology) and the Open Security Standards (OSS) Association.

PCS PARTNERS

TECHNOLOGY PARTNERS

MEMBERSHIPS

A familial environment, mutual trust and appreciation for each individual are the factors that make PCS an attractive employer. We value a well-balanced mix of generations and open communication among us.

Such a positive working climate favors innovative thinking and a high level of motivation. A large proportion of employees have worked for PCS for many years – convincing proof of the excellent working atmosphere in the company.

TOGETHER

PCS is committed to the fundamental principles of sustainability and corporate responsibility. We rely on various initiatives to ensure a superior environmental performance of our product range, from energy-efficient operation to avoiding toxic substances in the production of INTUS hardware.

PCS also attaches great importance to the durability of all its devices. To foster sustainability, several device generations may be operated within the same installation

ENVIRONMENT

MATTERS CLOSE TO OUR HEART

We are grateful for our stable economic situation. Therefore, sharing with others is a matter close to our heart for us. We support charitable organizations around our sites and actively engage in selected international projects our employees have personally recommended to us.

EXPERTISE-DRIVEN IMPLEMENTATION.

Once you have decided for a PCS solution, PCS Customer Services will accompany your project throughout the product lifecycle. Experienced and competent project managers will be at your side during all phases of implementation, professionally taking care of you from initial site inspection, consultation and planning to hardware installation and software configuration.

It is important to us to advise and support you in all matters – competently, quickly and flexibly. Precise project documentation ensures transparency and planning security for the future. Service and maintenance of your installation is PCS's recipe for a long service life.

Our expertise lies in the implementation.

WE ARE YOUR SOLUTION PARTNER FOR TIME MANAGEMENT AND BUILDING SECURITY.

WE are PCS.

We live a culture of appreciation in our team. Our employees work together on an equal footing and in flat hierarchies. Agile development, personnel development and transparent bonus payments are key elements of our corporate culture. That's why you can be sure that your contact persons at PCS will remain the same for many years.

One thing is clear: We take time for your security.

Sincerely yours: PCS Systemtechnik.
