

**Janitor**® is the first fully SAP integrated solution for access control and time recording. The software **Janitor**® is characterized by a high level of integration with SAP HCM, SAP OM and S/4HANA EM.

The complete access management is carried out via the SAP user interface - a fundamental advantage, because it guarantees operation without start-up difficulties. The SAP role concept is used to define user rights accordingly and to store any changes in a revision-proof manner. Access profiles in **Janitor**® are derived or inherited from SAP feature control or organizational management.

**Janitor**® thus makes use of the information that is already maintained in SAP Personnel Administration. Access rights are assigned automatically as soon as the employee enters the company, changed in the event of organizational changes and withdrawn again as soon as the employee leaves. In addition, individual rights can be added or removed in a separate infotype over a defined period of time (delimitation).

All INTUS readers and terminals from PCS can be used for access control. The terminal management and the device definition of the access readers takes place in the SAP dialog. The evaluations also run directly in SAP. To complete access control and time recording, the **Janicard**® module is available for convenient badge creation.

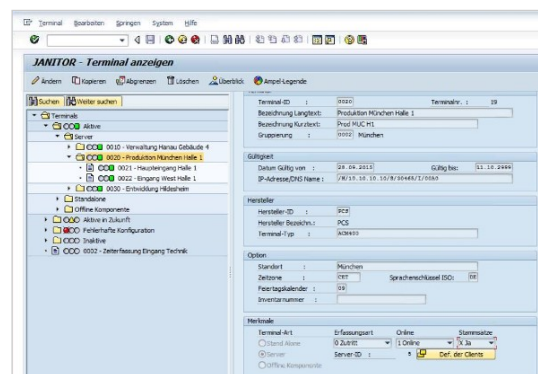

### Special features

- Access control and access control fully integrated in SAP time recording
- Assigning rights using SAP characteristic control or SAP OM
- Additional individual access profiles
- All new installations and changes are logged in a revision-proof manner
- All INTUS online access readers, access control managers and time recording terminals can be connected
- Administration of access readers via SAP attendance and absence times
- Functional check
- Administration of access readers via SAP attendance and absence times
- Safety-relevant evaluation functions
- ID card creation via **Janicard**® module

## Software – Access Control and Time Recording in SAP

# Janitor® by Drakos.

- + Access control and time recording completely in the SAP dialog
- + Own SAP Infotype for Janitor
- + Authorization assignment via SAP characteristic control or SAP OM
- + Audit-proof data storage
- + Mixed installation of INTUS devices with hardware from other manufacturers possible
