DEXIOS

More Security, Comfort and Efficiency

DEXIOS is a modern, web-based application for professional company-wide building security. The application not only supports you in access control, but also offers you the option of managing time recording and Visitor Management. Thanks to the high user experience, you do not need several programs, but can control and evaluate everything in one application.

The application can be used without client installation via common web browsers. You can choose between ondemand installation on local servers (on-premises) or in the cloud. Thanks to the open and scalable interfaces, the flexible connection of time recording and access control to ERP, HR, building management or security systems is possible at any time.

Add-on modules

The **Alarm Management** and **Site Map** modules extend the basic module with numerous intelligent access functions, such as door-open time monitoring. Search directly for people present or be notified in the event of a defined event. Even an Evacuation Manager is part of the Alarm Management module.

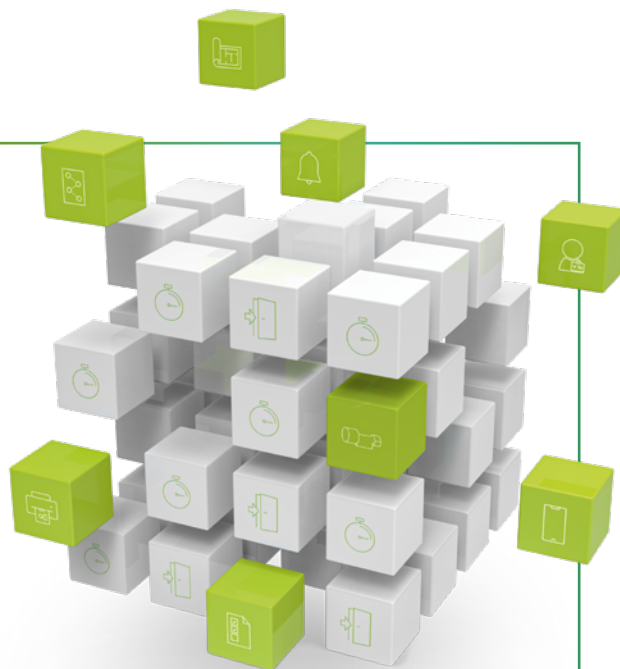

Streamline your administrative processes with the **ID Card Printing** module. Predefined templates for ID cards, for example, allow you to quickly create ID cards for new employees.

The **Workflow** module relieves HR and Security departments in the assignment and administration of access rights and reduces human error in the process. DEXIOS can be used to map application/ approval processes for Access Permissions simply, quickly and securely.

The **Mechatronics** module enables direct connection of the INTUS PegaSys and INTUS Flex access components. The INTUS Flex Gateway allows you to fully integrate the INTUS Flex components into the online access control system.

The **Visitor Management** module offers you a visitor management system that is fully integrated into your access control system. A distinction can be made between day visitors (visitor badge) and external companies (functional badge). Audit-proof documentation of visit processes is guaranteed. The self-service portal enables self-registration of all visitors. Security instructions, for example, can be displayed there.

Give your HR managers a quick overview of the attendance status of employees with the **Attendance Tableau** module.

MIX & MATCH

What makes DEXIOS particularly strong

Modern software solution

So your access control is implemented innovatively: cloud-enabled, web-based and with high security standards.

Strong overall solution

Flexible interfaces help you to integrate DEXIOS into your existing IT environment as part of an overall solution.

Future-proof

DEXIOS grows with your requirements and is scalable to your company's needs thanks to its modular structure.

Simple Application

The intuitive user interface is suitable for all users in your company and can be used from anywhere via a web browser.

Efficient support

Cost and time savings through automated processes. DEXIOS provides support for internal workflows and ensures transparency through overview individual reports.

All-round carefree package

You can rely on the many years of expertise of our services: from consulting, concept development and installation to training and maintenance.

Further information:

Interfaces

- Transfer of master data from e.g. SAP via standardised interfaces
- Connection of further ERP systems via web service interfaces

Application security and data protection

- Connection to existing Active Directory (LDAP)
- Comprehensive role and rights management

Automated reports and evaluations

- Automated GDPR-compliant reports
- Audit-proof documentation
- Exportable evaluations

Integration into the PCS world

- Simple and secure administration of INTUS products such as time recording terminals, access control managers and access readers
- Display of the current connection status of the hardware

Time for security.
