Agenda:

- Access Control
- Time & Attendance
- Video Surveillance

SUCCESS STORY

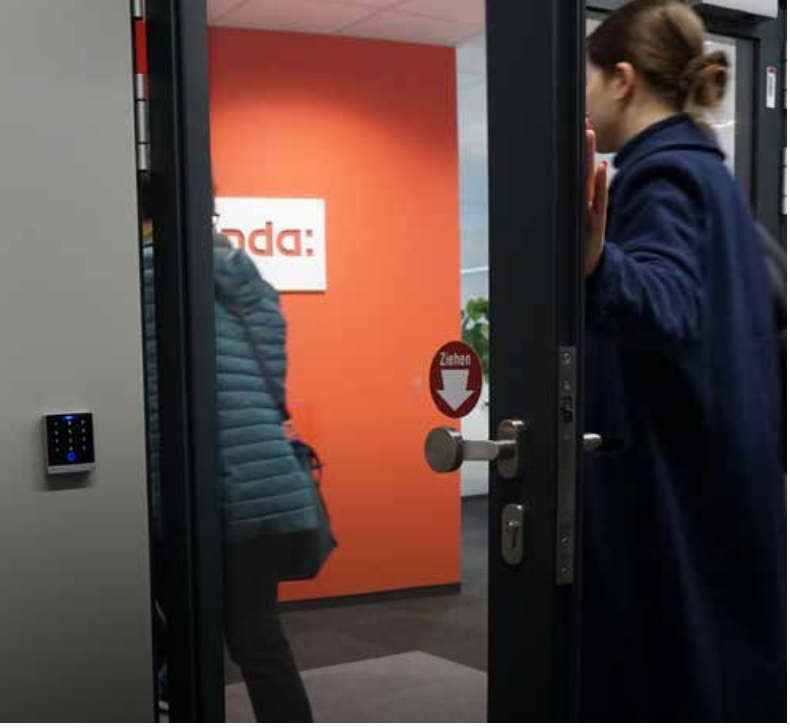
About Agenda Informationssysteme

Founded in 1984, Agenda is an owner-managed software company based in Rosenheim, Germany. Today, more than 350,000 users—primarily small and medium-sized businesses as well as tax and business consultants—rely on Agenda's solutions. The company's portfolio covers HR management, accounting, tax calculation, and office management.

Agenda offers an integrated system of software, IT solutions, services, and expertise, providing professionals with the tools they need for their daily work. Personalized customer support and regular online seminars are just some of the ways Agenda delivers added value to its clients.

Time for security.

pcs



„The new cards have made our organization so much simpler—they're a real asset. With PCS, everything is easier. I can assign or remove access rights in the software in just a minute. Overall, I'm extremely satisfied with the PCS solution."

Martin Lippert,
Systemadministrator Facility Management,
Agenda Informationssysteme GmbH & Co. KG

Challenge

As part of its "Green Agenda" strategy, Agenda set out to achieve climate-neutral operations. This commitment led to a partial core renovation and a complete energy retrofit of its headquarters to support more sustainable business practices. Early in the planning process, Agenda partnered with PCS Systemtechnik to develop a comprehensive security concept for every area of the site.

Solution

As a provider of business software, Agenda handles highly sensitive customer data. Protecting access to internal workspaces was therefore a top priority. Office entry is managed via a Axovend access control system, while the rear entrance remains locked except for authorized visitors, who can request access through a high-quality Behnke IP intercom. When a visitor calls, their video image appears automatically on a monitor, allowing reception staff to communicate and grant access with a single click.

Parking garage access is also controlled: users receive a windshield UHF sticker that opens the garage door contactlessly via a long-range reader. Employees who cycle to work use RFID access readers. For time and attendance, Agenda relies on INTUS terminals, with two INTUS 5600 units at the main entrance serving as a visual highlight.

Benefits

With the new security concept, Agenda introduced future-proof employee badges featuring encrypted technology and multifunctional capabilities. Employees received personalized badges in Agenda's corporate design, complete with their photo. These badges are used for time tracking, access control, meeting room booking, and even locker access. They also support offline access control: when an employee first uses a networked RFID reader, their access rights are written directly onto the card for use with mechatronic door systems.
