# SUCCESS STORY

## About ORF Vienna

The Austrian Broadcasting Corporation (ORF) is an independent public service media organization, defined as a foundation under public law. Based on its legal mandate, ORF offers a comprehensive tri-media program portfolio covering information, science, culture, sports, entertainment, film and series, as well as religion—across 12 radio stations, four television channels, nine regional studios,

and its online presence. This makes ORF Austria's leading electronic media outlet.

A worldwide network of correspondents contributes to ORF's diverse tri-media programming.

*Time for security.*

*„We were particularly impressed by the current INTUS 5600 time recording terminal, as we were able to design the user interface and touch screen perfectly according to our ORF requirements and specifications.“*

Rudolf Rezucha,  
Application Development,  
ORF Vienna

## Challenge

ORF Vienna relies on SAP ERP for its internal organization. Initially, employee time recording was managed as a standalone system. To simplify administration, ORF sought a time recording solution that could be integrated into SAP. Additionally, the aging booking devices needed to be replaced with new hardware featuring a modern interface and SAP connectivity. The existing RFID cards using the MIFARE® reading method were to remain in use.

## Solution

The decision was made in favor of the German manufacturer PCS Systemtechnik from Munich. ORF was convinced by the DEXICON software for time recording, which features a regularly certified interface to SAP and can utilize master data from SAP for time management. ORF also appreciated the PCS INTUS 5600 time recording terminals. These terminals offer a customizable frame, allowing the touch interface to be designed according to individual templates and color preferences.

The large 5.7" color display is highly legible, and the micro-etched touchscreen is especially robust. The device is powered via an integrated Ethernet connection (PoE). Communication with the main SAP system is updated daily. If the system is offline, the terminal stores the recorded times.

## Benefits

ORF wanted a time recording terminal with an intuitive user interface. Various function keys such as „Business Trip“ and „Balance“ are represented by symbols on colored buttons; when a button is pressed, the display changes to the corresponding function color, making the selected function immediately clear. The template was created by ORF and implemented by PCS. ORF's requests were also accommodated: the terminal was preset so that, depending on the time of day, either „Clock In“ or „Clock Out“ is automatically selected.

The working times recorded by the INTUS 5600 terminals are transferred directly to SAP ERP and are immediately available to HR management.
